Sorry. It was a typo. The area code is 415 (not 414). I've been out of the office for the last couple weeks.

Mr. Cooper,

The phone number that you sent me for you does not work. Can you please call me?

Chris Rowe (after 11:00 AM PST)

In a message dated 10/9/2008 1:45:03 P.M. Pacific Daylight Time, Cooper.David@epamail.epa.gov writes:
Dear Ms. Rowe --

Thank you for your interest in the Santa Suzana Field Lab site.

Nicole will be able to answer your question about where your home sits in relation to the winds.

I've put your name on the list of potential people to interview for the CIP. Either myself or a contractor will contact you about the timing of an interview once we make a decision on the dates.

Regarding the TASC program, EPA is in the process of developing the scope of work for the radiological background study. I talked with Luis and he's aware of the timing. We will follow up with you on the TASC program as work progresses.

If you have any questions, you can also contact us at EPA's toll-free

message line (800-231-3075) or call me direct at 414-972-3245.

Santa Susana Field Laboratory

Dear Mr. Cooper,

First I want to thank the EPA for providing me with the Background Study letter. The first question that I would like to ask - does my home fall into the prevailing winds area of the SSFL?

FX-6 Personal Privacy

Next, I would very much like to be involved in the Community Involvement Plan. I have been actively involved in the cleanup for two years. And yesterday, I received the Group 8 RFI hard copy report from DTSC. I also have the Draft Data Gap Analysis in a hard copy format.

I have very much appreciated all of the time that many EPA employees have spent giving me technical assistance in understanding the SSFL site; where we are in regards to cleanup; and the complexities of

listing (or not listing); how the EPA is affected by SB 990; the DOE EIS; etc.

For Mr. Garcia - Bakarich: I would very much like an independent technical advisor to interpret cleanup documents and help the community understand technical information about this site. This information needs to be given to the whole SSFL community.

While there are many websites dedicated to the SSFL, no one in the community is obligated to educate and inform other community members.

The end result is a "Data Gap" for some community members, and misinterpretations for others. All members of the community must be engaged at our own willingness and at our own levels of educational expertise until we all comprehend the whole cleanup process.

I look forward to working with all of you in the future.

Thank you.
